

Restores Regularity and Supports Detox

Actazin®, derived from New Zealand green kiwi, contains a number of bioactive nutrients that effectively and gently support digestion and the laxation process. The bioactives include actinidin, which enhances protein digestion, and dietary fiber, polyphenols, vitamins and amino acids to promote gastric movement, regularity, gut mucus production, control inflammation, and increase fecal bulking. Actazin® also acts as a prebiotic, providing nutrients for good gut bacteria and stimulating the production of short chain fatty acids (SCFAs). Doses as low as 600 mg of Actazin have been shown to improve gut health and digestion. In clinical trials, participants also report improved quality of life scores with Actazin supplementation.

PRODUCT FACTS:

Advantages:

- Promotes and facilitates bowel regularity
- Natural source of fiber, polyphenols and proteolytic-protein digesting enzymes
- Safe, no side effects, natural, clean label ingredient
- Excellent organoleptic properties in taste, aroma, texture and mouth feel
- Dose: 600 mg/day

Certifications:

- Organic
- Non-GMO Project Verified

Applications:

- Digestive health formulations
- Detoxification formulations
- Prebiotic and probiotic formulations
- Enzyme formulations
- Green food blends (capsules, tablets, powders)
- Fruit and veggie formulations
- Whole food vitamin complexes
