

BerriQi® is a natural lung support ingredient derived from New Zealand boysenberries. BerriQi can be taken daily to help support a healthy respiratory system with targeted anti-inflammatory and antioxidant mechanisms. BerriQi protects the health of the lungs particularly in those exposed to pollution, allergens and other environmental irritants. New Zealand-grown boysenberries have higher polyphenol and antioxidant levels than boysenberries grown elsewhere, including the USA. Numerous clinical studies led by New Zealand's Institute of Plant and Food Research have shown New Zealand boysenberries help repair damaged lung tissue, reduce inflammation, and reduce mucus production in the lungs.

PRODUCT FACTS:

Advantages:

- Reduces inflammation
- Reduces mucus production in the lungs
- Supports healthy lung tissue
- Clinically-supported
- No added sugars or flavors
- Patent pending
- 2.1 g powder dose/
5.5 mL liquid dose

Applications:

- Shots
- Beverages
- Gummies
- Capsules/tablets

Certifications:

- GRAS
- Non-GMO
