

kollaGen II-xs™

kollaGen II-xs™ is a type II collagen extracted from young avian sternum cartilage to promote healthy joint cartilage. Its proprietary, patented technologies maintain the integrity of the long chain amino acids ensuring the body's own superior natural enzymes recognize the precise genetic code for maximum assimilation for ultimate joint health. kollaGen II-xs™ (extra strength) is certified to contain 55–70% Collagen Type II and naturally contains 30–45% mucopolysaccharides (carbohydrates, chondroitin, glucosamine and hyaluronic acid), the major components of joint cartilage. kollaGen II-xs™ supplies the body with more hyaluronic acid than any collagen products on the market. kollaGen II-xs™ has positive results in animal and human clinical studies.

PRODUCT FACTS:

Advantages:

- Optimum molecular weight for maximum absorption (typically higher molecular weights are more difficult to absorb)
- A major component of hyaline joint cartilage
- Helps keep joints healthy and flexible
- Naturally occurring mucopolysaccharides
- Contains a minimum of:
 - 10–13% Hyaluronic Acid
 - 20–25% Chondroitin Sulfate
 - 50–70% Collagen type II Protein
- 1500 mg daily

Applications:

- Joint products
- Sports nutrition products
- Suitable for dietary supplements, pills and tablets
- Suitable for food & beverage, and cosmetics
- 100% cold water soluble

Certifications:

- GMO Free
- Allergen Free

A detailed illustration of a human knee joint, showing the femur, tibia, and patella. The joint is rendered in a semi-transparent, light blue/green color, allowing the internal structures to be visible. The text 'Bone & Joint' is overlaid on the right side of the joint in a large, white, serif font. The background of the illustration is a dark green with a subtle grid pattern.
