

AP-Bio® is a fast acting, phytochemical composition derived from *Andrographis paniculata*, with seven bioactives clinically researched to support immune health at a low dose. AP-Bio has been studied in multiple preclinical and clinical efficacy studies, which have all shown potent, reliable, and effective immune-support benefits, especially in individuals who reported experiencing symptoms of common cold generated by a lowered immune response. It has been shown to inhibit the release of inflammatory mediators via LTB4, PGE2, TXB2, IL-6, IL-1B, and nitric oxide. AP-Bio showed two times the efficacy vs. placebo in a clinical study against nine common cold key measurements. AP-Bio is clinically shown to support immunity at 200 mg per day and is known to support the management of multiple symptoms of common cold with faster onset of action. This low dose allows for flexibility in formulation and more than 800 million doses have been consumed worldwide.

PRODUCT FACTS:

Advantages:

- Supports management of multiple cold and flu symptoms
- Natural support for immunity and inflammation
- Clinical research
- Standardized to andrographolide
- Sustainable supply chain
- Fast-acting
- Low dose: 200 mg/day

Applications:

- All forms of immune products
- Tablets, capsules, softgels

Certifications:

- Non-GMO Project Verified
- USP compliant for pesticide residue & heavy metals
- Kosher; Halal
